The **Book a Doctor Appointment System** is a modern healthcare solution that digitizes the appointment scheduling process. By combining **React.js** for the user interface, **Node.js** and **Express.js** for backend services, and **MongoDB** for data storage, the system provides a secure, scalable, and efficient platform for patients, doctors, and administrators. It improves accessibility to healthcare services, reduces manual paperwork, minimizes scheduling conflicts, and enhances the overall patient experience. This project also demonstrates the practical application of full-stack web development concepts, including RESTful APIs, authentication, database management, and responsive interface design.
