

```
const jwt = require("jsonwebtoken");

module.exports = async (req, res, next) => {
  try {
    const authHeader = req.headers["authorization"];
    if (!authHeader) {
      return res
        .status(401)
        .send({ message: "Authorization header missing", success: false });
    }

    const token = authHeader.split(" ")[1];
    if (!token) {
      return res
        .status(401)
        .send({ message: "Token not provided", success: false });
    }

    jwt.verify(token, process.env.JWT_KEY, (err, decoded) => {
      if (err) {
        return res
          .status(401)
          .send({ message: "Token is not valid", success: false });
      } else {
        req.body.userId = decoded.id;
        next();
      }
    });
  } catch (error) {
    console.error(error);
    res
      .status(500)
      .send({ message: "Internal server error", success: false });
  }
}
```

The **Book a Doctor Appointment System** is a full-stack web application developed to simplify the process of booking medical appointments. It allows patients to search for doctors, view their profiles, select available time slots, and book appointments online. Doctors can manage their schedules and appointments, while administrators oversee the entire system. The application is developed using the **MERN Stack**:

- **MongoDB** – Database
- **Express.js** – Backend Framework
- **React.js** – Frontend
- **Node.js** – Runtime Environment

The **Book a Doctor Appointment System** homepage serves as the main entry point for patients to access healthcare services online. It is designed with a clean, responsive, and user-friendly interface that enables users to search for doctors, explore medical specialties, book appointments, and access various healthcare services. The homepage acts as a bridge between patients, doctors, and the healthcare management system by providing quick navigation to essential features.
